III. *Some Conjectures concerning the* Poſition *of the* Colure *in the* ancient Sphere; *communicated in a Letter from the Rev^d* Ebenezer Latham, *M. D. and V. D. M. to Dr.* Mortimer, *Secr.* R. S.

SIR,

Read Nov. 18. 1742. I Have an Opportunity of tranſmiting to you a Draught of the Conſtellation *Aries*, as it was exactly copied by Dr. *White*, from a Book in the fine Library of your learned Uncle *Samuel Sanders*, Eſq; a worthy Member of the ROYAL SOCIETY. I do not know whether it may not be eſteemed of ſome Moment towards the determining the famous Controverſy with reſpect to Sir *Iſaac Newton*'s Chronology. Dr. *Halley* obſerves *, "That the Diſpute is chiefly, Over what Part of the "Back of *Aries* the *Colure* paſſed. Sir *Iſaac Newton* "takes it to be over the Middle of the Conſtellation; "*P. Souciet* will have it, that it paſſed over the Mid-"dle of the *Dodecatemorion* of *Aries*, which by "Conſequence would make it paſs about Mid-way "between the Rump and Firſt of the Tail;" which Situation could never be ſaid to be over the Back: Whereas, if the Ring in this Cut [*ſee in the* TAB. Fig. 1.] was deſigned, as I apprehend, to image the

* *Philoſophical Tranſactions*, N° 397.

Colure

Colure in the *ancient Sphere*, it exactly anſwers *Hipparchus*'s Deſcription—ἐν δὲ τῷ ἑτέρῳ κολούρῳ φησὶ κεῖσθαι τὸν κριὸν τὰ νῶτα κατὰ πλάτος. and juſtifies the Conſtruction Sir *Iſaac* put on thoſe Words beyond Exception. The Sculptures from whence this was taken, have the Title of *Aratæa, ſive Signa Cœleſtia, in quibus Aſtronomicæ Speculationes Veterum ad Archetypa vetuſtiſſimi Aratæorum Cæſaris Germanici Codicis* (44) *ob oculos ponuntur a Jacobo de Geyn ex Biblioth. Acad. Lugd. Bat. Amſtel.* 1652. *

As I have no Opportunity to conſult the Original, it might give more Weight to the Account, if the *Connoiſſeurs* of your learned SOCIETY could ſupport the Engraver's Teſtimony as to the great Antiquity of that. I will only beg Leave to obſerve farther, that as this Catalogue begins with the *Draco*, which the Ancients ſeem to place at the Head of their Conſtellations; perhaps it may give ſome Light into the Time of the Book of *Job*, as well as into the Senſe of that Place. For when he ſays, Chap. xxvi. 13. *By his Spirit he has garniſhed the Heavens; his Hand has formed the crooked Serpent*; I ſubmit it to the Judgment of the Critics, whether it is not highly probable the Writer muſt have lived within that Period of Time wherein a Star of that Conſtellation might paſs for the Polar Star: And then, if the Aſteriſms are ſuppoſed to be placed in ſome ſuch Order as here, the expreſs Mention that he only makes

of

of this, was ſufficient to refer us to the whole Syſtem or Furniture of the Heavens. But I am afraid I become tedious. I am

Your Illuſtrious SOCIETY's,
and your moſt obedient,
humble Servant,

Findern, July 8. 1742.

E. Latham.

IV. *The Caſe of an Extraordinary* Dropſy, *communicated in a Letter from* Tho. Short, *M. D. to* C. Mortimer, *M. D. Sec.* R. S.

Sheffield, Aug. 2. 1742.

SIR,

Read Nov. 18. 1742.

THE following Caſe being ſomewhat uncommon, perhaps it may not be wholly unworthy of your Notice. Laſt *January* I was called to viſit a young Woman of Thirty Years of Age, who about Seven Years ago, had like a ſevere Fit of the Stone in her Left Kidney, with all the common Symptoms of a Stone, but by ſome Means recovered again. Three Years ago ſhe had another Fit, but got better in a few Days; though ſhe moſtly complained of a dull Pain in that Place ever after. When I ſaw her, I found her *Menſes* had been very irregular and ſmall ſince her laſt *Paroxyſm*, and totally obſtructed ſince *September*; her Pulſe very ſmall and quick, her Countenance pale and languid; a Pain at the Pit of her Stomach, towards the
